# 1 Introduction

The `textool` package is a comprehensive LaTeX package designed to streamline academic writing, particularly in mathematics and technical fields. It provides:

- Extensive mathematical symbol libraries with consistent naming conventions
- Simplified figure and multi-figure insertion commands
- Optional theorem environments (opt-in)
- Optional algorithm support (opt-in)
- Enhanced equation formatting tools
- Probability and statistical operators
- Color definitions for presentations
- Robust compatibility with other packages

## 1.1 What's New in Version 4.0

### Important

Version 4.0 introduces significant changes to improve compatibility and stability:

- **Opt-in model:** Theorems and algorithms are now OFF by default
- **Enhanced compatibility:** Better conflict resolution with other packages
- **Tabularx support:** Fixed array package loading for tabularx compatibility
- **Robust loading:** Conditional checks prevent redefinition conflicts

## 1.2 Installation

Place `textool.sty` in your LaTeX project directory or in your local `texmf` tree. Then load it in your document preamble with the desired options:

```

1      % Basic usage (math symbols and figures only)
2      \usepackage{textool}
3
4      % With theorem environments
5      \usepackage[theorems]{textool}
6
7      % With algorithm support
8      \usepackage[algorithms]{textool}
9
10     % With both theorems and algorithms
11     \usepackage[theorems,algorithms]{textool}
12
13     % Minimal mode (math only, no graphics)
14     \usepackage[minimal]{textool}
```

Option	Default	Description
theorems	OFF	Enables theorem environments (theorem, lemma, etc.)
algorithms	OFF	Enables algorithm and pseudocode support
minimal	OFF	Loads only core math features, no graphics

Table 1: Package options in textool v4.0

### 1.3 Package Options

### 1.4 Package Philosophy

The package follows these design principles:

1. **Safety First:** Opt-in model prevents conflicts with user definitions
2. **Consistency:** All symbols follow predictable naming patterns
3. **Simplicity:** Complex tasks require minimal syntax
4. **Compatibility:** Works alongside other standard packages
5. **Completeness:** Provides comprehensive symbol coverage
6. **Robustness:** Conditional loading prevents redefinition errors

## 2 Mathematical Symbols

### 2.1 Symbol Naming Convention

TexTool provides systematic access to mathematical symbols using consistent prefixes:

Prefix	Meaning	Example
mb	Blackboard bold	$\backslash mbR \rightarrow \mathbb{R}$
ccal	Calligraphic	$\backslash ccalF \rightarrow \mathcal{F}$
bb	Bold	$\backslash bbx \rightarrow \mathbf{x}$
bbar	Bar over symbol	$\backslash bbarx \rightarrow \bar{x}$
hhat	Hat over symbol	$\backslash hhatx \rightarrow \hat{x}$
td	Tilde over symbol	$\backslash tdx \rightarrow \tilde{x}$

Table 2: Symbol prefix conventions

### 2.2 Blackboard Bold Letters

Used primarily for number sets and spaces:

#### Example

```

1   $\backslash mbR\$ \% Real numbers
2   $\backslash mbC\$ \% Complex numbers
3   $\backslash mbN\$ \% Natural numbers
4   $\backslash mbZ\$ \% Integers
5   $\backslash mbQ\$ \% Rational numbers
6   $\backslash mbP\$ \% Probability space

```

Result:  $\mathbb{R}, \mathbb{C}, \mathbb{N}, \mathbb{Z}, \mathbb{Q}, \mathbb{P}$

## 2.3 Calligraphic Letters

Used for spaces, algebras, and special sets:

### Example

```

1 $`ccalF$ % Sigma-algebra
2 $`ccalH$ % Hilbert space
3 $`ccalL$ % Linear operators
4 $`ccalM$ % Manifold

```

Result:  $\mathcal{F}, \mathcal{H}, \mathcal{L}, \mathcal{M}$

## 2.4 Bold Symbols

For vectors and matrices:

### Example

```

1 $`bbx \in \mbR^n$ % Vector x
2 $`bbA \bbx = \bbb$ % Matrix equation
3 $`balpha, \bbeta, \bbgamma$ % Bold Greek

```

Result:  $\mathbf{x} \in \mathbb{R}^n, \mathbf{Ax} = \mathbf{b}, \boldsymbol{\alpha}, \boldsymbol{\beta}, \boldsymbol{\gamma}$

## 2.5 Decorated Symbols

Command	Description	Output
<code>\bbarX</code>	Bar over X	$\bar{X}$
<code>\hatX</code>	Hat over X	$\hat{X}$
<code>\tdX</code>	Tilde over X	$\tilde{X}$
<code>\bbarx</code>	Bar over x	$\bar{x}$
<code>\hatx</code>	Hat over x	$\hat{x}$
<code>\tdx</code>	Tilde over x	$\tilde{x}$
<code>\bbargamma</code>	Bar over gamma	$\bar{\gamma}$
<code>\hattheta</code>	Hat over theta	$\hat{\theta}$
<code>\tdsigma</code>	Tilde over sigma	$\tilde{\sigma}$

Table 3: Decorated symbol examples

## 3 Probability and Statistics

### 3.1 Expectation Operators

TexTool provides multiple expectation notations:

### Example

```

1      $ \E{X} $          % E[X]
2      $ \Ec{X} $         % E(X) with parentheses
3      $ \Eb{X^2} $       % E with big brackets
4      $ \EB{X^2} $       % E with Big brackets
5      $ \EE{Y}{X|Y} $    % E_Y[X|Y] conditional
                           expectation

```

Result:  $\mathbb{E}[X]$ ,  $\mathbb{E}(X)$ ,  $\mathbb{E}[X^2]$ ,  $\mathbb{E}[X^2]$ ,  $\mathbb{E}_Y[X|Y]$

## 3.2 Probability Operators

### Example

```

1      $ \Pr{X > 0} $      % P[X > 0]
2      $ \Pr{A \cup B} $    % P(A union B) with
                           parentheses
3      $ \Pb{X = k} $       % P with big brackets
4      $ \PP{X}{Y|X} $     % P_X[Y|X] with subscript

```

Result:  $\Pr{X > 0}$ ,  $\mathbb{P}(A \cup B)$ ,  $\mathbb{P}[X = k]$ ,  $\mathbb{P}_X[Y|X]$

## 3.3 Statistical Functions

### Example

```

1      $ \Var{X} $           % Variance
2      $ \Covp{X}{Y} $       % Covariance
3      $ \ind{x > 0} $      % Indicator
                           function
4      $ \Ind{A} $           % Alternative
                           indicator
5      $ \Ent{X} $           % Entropy H[X]
6      $ \KL{P}{Q} $         % KL divergence
7      $ \MI{X}{Y} $         % Mutual
                           information

```

Result:  $\text{Var}[X]$ ,  $\text{Cov}[X, Y]$ ,  $\mathbb{I}\{x > 0\}$ ,  $\mathbf{1}\{A\}$ ,  $\mathsf{H}[X]$ ,  $D_{\text{KL}}(P \parallel Q)$ ,  $I(X; Y)$

## 4 Figure Management

### Important

Figure commands are available by default unless you use the `minimal` option.

### 4.1 Single Figures

TexTool simplifies figure insertion with brace-based syntax:

## Example

```

1      % Basic figure (80% width)
2      \fig{{image.png},{Caption text},{label}}
3
4      % Custom width figure
5      \figw[0.6]{{image.png},{Caption text},{label}}
6
7      % Exact placement figure
8      \figH{{image.png},{Caption text},{label}}
9
10     % Figure without caption
11     \fignc{{image.png},{label}}

```

## Tip

Labels are automatically prefixed with `fig:`, so you reference them as `\ref{fig:label}`

## 4.2 Multi-Figure Grids

TexTool supports grid layouts from  $1 \times 2$  up to  $4 \times 4$ :

### 4.2.1 $2 \times 2$ Grid Example

```

1      \mcfigTwoByTwo{{Overall caption},{main-label}}
2      {{img1.png},{Caption 1},{label1}}
3      {{img2.png},{Caption 2},{label2}}
4      {{img3.png},{Caption 3},{label3}}
5      {{img4.png},{Caption 4},{label4}}

```

### 4.2.2 Available Grid Commands

Command	Grid Layout
<code>\mcfigOneByTwo</code>	$1 \times 2$ (2 images)
<code>\mcfigTwoByTwo</code>	$2 \times 2$ (4 images)

Table 4: Multi-figure grid commands (partial list)

## Tip

The package provides many more grid layouts. Check the source code for the complete list of available `mcfig` commands.

## 4.3 Spacing Control

Adjust spacing in multi-figure layouts:

```

1      \setSubfigTopSkip{10pt}    % Space above figures
2      \setSubfigBottomSkip{5pt}   % Space between rows
3      \setSubfigCapSkip{3pt}     % Space below captions

```

## 5 Theorem Environments (Optional)

### Warning

**Theorem environments are OFF by default in v4.0!**

You must explicitly enable them with `\usepackage[theorems]{textool}`

### 5.1 Enabling Theorems

To use theorem environments, you must load the package with the `theorems` option:

#### Example

```

1 % Enable theorems
2 \usepackage[theorems]{textool}
3
4 % Or with algorithms too
5 \usepackage[theorems,algorithms]{textool}

```

### 5.2 Available Environments

When enabled, TexTool provides pre-styled theorem environments:

#### Example

```

1 \begin{theorem}
2   Every continuous function on a
3   compact set is uniformly
4   continuous.
5 \end{theorem}
6
7 \begin{lemma}
8   If  $f$  is differentiable, then  $f$ 
9   is continuous.
10 \end{lemma}
11
12 \begin{definition}
13   A set  $S$  is compact if
14   every open cover has a finite
15   subcover.
16 \end{definition}

```

### 5.3 Complete List of Theorem Environments

### 5.4 Custom Proof Environment

The `myproof` environment is always available (doesn't require the `theorems` option):

Environment	Purpose
theorem	Major results
lemma	Supporting results
proposition	Standalone statements
corollary	Direct consequences
definition	Formal definitions
remark	Clarifying comments
assumption	Stated assumptions
observation	Notable observations
fact	Known facts
property	Mathematical properties
test	Test cases

Table 5: Theorem-like environments (when enabled)

**Example**

```

1      \begin{myproof}
2          Let $x \in S$. By assumption...
3          Therefore, the statement holds.
4      \end{myproof}

5
6      \begin{myproof}[of Theorem 3.1]
7          Using the previous lemma...
8      \end{myproof}

```

## 6 Algorithm Support (Optional)

**Warning****Algorithm support is OFF by default in v4.0!**You must explicitly enable it with `\usepackage[algorithms]{textool}`

### 6.1 Enabling Algorithms

To use algorithm environments, load the package with the `algorithms` option:**Example**

```

1      % Enable algorithms
2      \usepackage[algorithms]{textool}

3
4      % The package will load algpseudocode and
5      % algorithm
6      % unless algorithmic is already loaded

```

## 6.2 Compatibility Notes

### Important

The package intelligently detects existing algorithm packages:

- If `algorithmic` is already loaded, `algpseudocode` will be skipped
- If neither is loaded, `algpseudocode` is preferred
- The `algorithm` float environment is loaded if available

## 7 Equation Environments

### 7.1 Standard Equation Helpers

#### Example

```

1      % Aligned equation with number
2      \f{eq}{f(x) &= x^2 + 2x + 1 \\
3          &= (x + 1)^2
4      }
5
6
7      % Aligned equation without number
8      \n{f}{eq}{g(x) &= \sin(x) + \cos(x) \\
9          &= \sqrt{2}\sin(x + \pi/4)
10     }
11

```

### 7.2 Slide Equation Environments

For presentations and slides:

Environment	Description
<code>slideeq</code>	Regular equation for slides
<code>nslideeq</code>	Equation without numbering
<code>sslideeq</code>	Small size equation
<code>fslideeq</code>	Footnote size equation
<code>slidealign</code>	Aligned equations
<code>nslidealign</code>	Aligned without numbering
<code>sslidealign</code>	Small aligned equations
<code>fslidealign</code>	Footnote size aligned

## 8 Color and Formatting

### Important

Colors and formatting commands are not available in `minimal` mode.

## 8.1 Predefined Colors

TexTool defines several colors for highlighting:

### Example

```

1      \red{Error message}
2      \blue{Information}
3      \green{Success}
4      \grey{Disabled text}
5      \highlight{Important}
6      \todo{Remember this}
```

## 8.2 Arrow Bullets

For itemized lists with arrows:

### Example

```

1      \begin{itemize}
2          \arritem First point
3          \ai Second point (short form)
4          \item[\darrbullet] Two-way
               relationship
5      \end{itemize}
```

## 9 List Environments

### 9.1 Custom List Environment

The `mylist` environment provides controlled spacing:

### Example

```

1      \begin{mylist}
2          \item First item with proper
               spacing
3          \item Second item
4          \item Third item
5      \end{mylist}
```

### 9.2 Exercise Environment

For homework and exercises:

## Example

```

1      \exercise{Prove the fundamental theorem of
2          calculus}
3
4      \exercisepart{State the theorem}
5      The theorem states that...
6
7      \exercisepart{Provide the proof}
8      We begin by considering...
9
10     \exercisepart{Give an example}
11     Consider  $f(x) = x^2$ ...

```

## 10 Text Commands

### 10.1 Mathematical Text

TexTool provides text commands for use in math mode:

Command	Output
\rank	rank
\diag	diag
\tr	tr (trace)
\st	s.t. (subject to)
\sign	sign
\argmax	argmax
\argmin	argmin

### 10.2 Section Commands

Custom section formatting:

```

1      \mysubsection{Section Title}
2      \mysubsubsection{Subsection Title}

```

## 11 Advanced Examples

### 11.1 Complete Mathematical Document

#### Example

```

1      \documentclass{article}
2      \usepackage[theorems]{textool}    % Enable
3          theorems
4
5      \begin{document}
6
7          \begin{theorem}
8              Let  $\bbX$  in  $\mathbb{R}^{n \times m}$  be a random
9              matrix with
10              $\mathbb{E}\{\bbX\} = \bbM$  and  $\text{Var}\{\bbX_{ij}\} = \sigma^2$ .
11             Then  $\bar{X} = \frac{1}{nm} \sum_{i,j} \bbX_{ij}$ 
12             converges to  $\text{tr}(\bbM)/nm$ 
13             as  $n,m \rightarrow \infty$ .
14         \end{theorem}
15
16         \begin{myproof}
17             By the law of large
18             numbers, we have
19             \begin{aligned}
20                 & \Pr\{\left|\bar{X} - \mathbb{E}\{\bar{X}\}\right| > \epsilon\} \\
21                 & \leq \frac{\text{Var}\{\bar{X}\}}{\epsilon^2} \\
22                 & = \frac{\sigma^2}{nm\epsilon^2} \rightarrow 0
23             \end{aligned}
24             as  $n,m \rightarrow \infty$ .
25         \end{myproof}
26
27     \end{document}

```

## 11.2 Using Different Package Options

### Example

```

1      % For a math-heavy document without
2          figures
3      \documentclass{article}
4      \usepackage[minimal]{textool}

5      % For a document with theorems but no
6          algorithms
7      \documentclass{article}
8      \usepackage[theorems]{textool}

9      % For a complete document with all
10         features
11     \documentclass{article}
12     \usepackage[theorems,algorithms]{textool}

13     % When using other theorem packages
14     \documentclass{article}
15     \usepackage{amsthm} % Load your theorem
16         package first
17     \usepackage{textool} % textool won't
18         redefine theorems

```

## 12 Troubleshooting

### 12.1 Common Issues

#### Warning

**Missing Theorem Environments:** In v4.0, theorems are OFF by default. If you get "undefined environment" errors, add the `theorems` option:  
`\usepackage[theorems]{textool}`

#### Warning

**Algorithm Package Conflicts:** The package checks for existing algorithm packages. If you need `algorithmic` instead of `algpseudocode`, load it before textool.

#### Warning

**Symbol Conflicts:** If a symbol is already defined by another package, textool will skip that definition. Load textool after other math packages if you prefer its definitions.

#### Warning

**Tabularx Compatibility:** Version 4.0 loads the `array` package first to ensure tabularx compatibility.

## 12.2 Best Practices

1. **Package Order:** Load `textool` after basic math packages but before document-specific definitions
2. **Choose Options Carefully:** Only enable features you need (theorems, algorithms)
3. **Minimal Mode:** Use `minimal` option for documents without figures
4. **Theorem Conflicts:** If using another theorem package, don't enable the `theorems` option
5. **Check Console Output:** The package prints loading information to help debug issues

## 12.3 Package Loading Messages

When loaded, `textool` outputs helpful information:

```

1 =====
2      textool v4.0 Robust Edition loaded
3      Options: theorems=OFF (default), algorithms=OFF (
4          default)
5      Array package loaded for tabularx compatibility
6      For basic use: \usepackage{textool}
7      With theorems: \usepackage[theorems]{textool}
=====
```

## 13 Migration Guide from Earlier Versions

### 13.1 From v1.x to v4.0

If you're upgrading from version 1.x, note these important changes:

#### Important

##### Breaking Changes:

- Theorems are now OFF by default - add `theorems` option
- Algorithms are now OFF by default - add `algorithms` option
- Some commands are now conditional to avoid conflicts

Old (v1.x)	New (v4.0)
<code>\usepackage{textool}</code> (got everything)	<code>\usepackage[theorems,algorithms]{textool}</code> (explicit opt-in)
Theorems always loaded	Theorems only with <code>theorems</code> option
Algorithms always loaded	Algorithms only with <code>algorithms</code> option

Table 6: Migration from v1.x to v4.0

Category	Common Commands
Package Loading	<code>\usepackage[options]{textool}</code>
Options	<code>theorems, algorithms, minimal</code>
Sets	<code>\mbR, \mbC, \mbN, \mbZ</code>
Vectors	<code>\bbx, \bby, \bbA</code>
Statistics	<code>\E{X}, \Var{X}, \Pr{A}</code>
Figures	<code>\fig{{file},{caption},{label}}</code>
Theorems*	<code>\begin{theorem}... \end{theorem}</code>
Greek	<code>\balpha, \beta, \gamma</code>

Table 7: Quick reference (\* = requires `theorems` option)

## 14 Quick Reference Card

### 14.1 Most Used Commands

## A Complete Symbol Tables

### A.1 All Blackboard Bold Symbols

A	B	C	D	E	F
G	H	I	J	K	L
M	N	O	P	Q	R
S	T	U	V	W	X
Y	Z				

### A.2 All Bold Symbols

Uppercase:

A	B	C	D	E	F
G	H	I	J	K	L
M	N	O	P	Q	R
S	T	U	V	W	X
Y	Z				

Lowercase:

a	b	c	d	e	f
g	h	i	j	k	l
m	n	o	p	q	r
s	t	u	v	w	x
y	z				

## B Version History

- **Version 1.0:** Initial release
- **Version 1.1:** Added compatibility checks, made all definitions conditional
- **Version 2.x:** Added conflict resolution mechanisms
- **Version 3.0:** Changed to opt-in model for safety
- **Version 4.0:**

- Fixed tabularx compatibility with array package
- Restored all features from original
- Enhanced robustness
- Improved package option system
- Better conflict detection
- Comprehensive loading messages

## C License and Contact

This package is provided as-is for academic use. For questions, bug reports, or feature requests, please contact the author at the email address provided.

The package development follows the principle of maintaining backward compatibility while improving robustness and preventing conflicts with other commonly used packages.
